PROFESSIONAL SUMMARY

IT Support and Systems Administration professional with **15+ years of experience** supporting enterprise users, infrastructure, cloud environments, business applications, and production systems. Strong background in **technical troubleshooting, identity and access management, cloud platforms, endpoint support, networking, incident resolution, automation, and technical documentation**.

Experienced in diagnosing issues from initial ticket or user report through resolution, root cause analysis, escalation, and implementation of long-term corrective actions. Strong hands-on experience with **Active Directory, Microsoft Entra ID, Windows Server, Microsoft Azure, AWS, DNS, DHCP, virtualization, PowerShell, Python, and cloud-based applications**.

Customer-focused and comfortable working with technical and non-technical users, cross-functional teams, and business stakeholders. Particularly interested in **SaaS administration, cloud support, identity and access management, automation, and continuous improvement**, with a focus on eliminating recurring issues rather than repeatedly resolving the same incidents.

CORE TECHNICAL SKILLS

IT Support & Troubleshooting

- End-user technical support
- Incident management and troubleshooting
- Root cause analysis
- Application and connectivity troubleshooting
- Remote technical support
- Production support
- Technical documentation and knowledge bases
- Incident escalation and resolution

Identity & Access Management

- Active Directory
- Microsoft Entra ID / Azure AD
- User and group administration
- Access permissions

- Group Policy
- Authentication and MFA concepts
- User lifecycle administration

Cloud & SaaS

- Microsoft Azure
- Amazon Web Services (AWS)
- AWS IAM
- Cloud-based applications
- SaaS application support
- Firebase / Firestore
- Cloud Functions
- Business application support

Systems & Networking

- Windows Server
- Windows environments
- Linux
- DNS
- DHCP
- TCP/IP
- Networking troubleshooting
- VMware
- Hyper-V
- Backup and disaster recovery

Automation & Scripting

- PowerShell
- Python
- Bash
- REST APIs
- Process automation
- Repetitive-task automation
- Monitoring and operational improvements

Applications & Development Technologies

- Docker
- Kubernetes
- PostgreSQL
- Angular
- React
- TypeScript
- PHP

PROFESSIONAL EXPERIENCE

Senior Systems Administrator

- Provided technical support for enterprise users, systems, infrastructure, and business-critical services.
- Diagnosed and resolved complex technical incidents involving **Windows environments, user access, networking, applications, servers, and cloud infrastructure**.
- Administered **Active Directory, user accounts, groups, Group Policy, DNS, DHCP, and access permissions**.
- Supported identity and access requirements across enterprise environments, including Microsoft Entra ID / Azure AD.
- Managed and supported **Microsoft Azure resources and cloud infrastructure**.
- Assisted with authentication, access, connectivity, and configuration issues affecting users and business applications.
- Performed incident investigation and **root cause analysis**, implementing corrective actions to prevent recurring problems.
- Supported VMware and Hyper-V virtualization environments.
- Performed server patching, upgrades, monitoring, backup, and disaster recovery activities.
- Collaborated with engineering, application, and infrastructure teams to resolve complex production incidents.
- Created **technical documentation, runbooks, troubleshooting procedures, and knowledge-base material** to improve support efficiency.
- Automated repetitive administrative and support tasks using **PowerShell and Python**.
- Identified opportunities to improve operational processes through automation, standardization, and preventive troubleshooting.
- Communicated technical issues, progress, and resolutions to technical teams and business stakeholders.

CLOUD & SaaS PROJECT EXPERIENCE

iPayWater – Cloud-Based Business Application

Angular | Firebase | Cloud Functions | Firestore

- Supported the development and deployment of a cloud-based business application.
- Provided **production support, troubleshooting, issue resolution, reporting, notifications, and continuous improvements**.
- Worked with Firebase, Firestore, Cloud Functions, and application services in a cloud environment.
- Investigated application issues and implemented corrective solutions.
- Supported application functionality, data flows, notifications, and operational processes.
- Improved the application through automation and continuous technical enhancements.

Yellow7 – Web Platform

Angular | PHP | Firebase

- Provided production support and application maintenance.
- Investigated and resolved application bugs and technical issues.
- Performed troubleshooting and implemented corrective changes.
- Supported ongoing application improvements in a cloud-based environment.

CLOUD & SYSTEMS CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate**
- **Microsoft Certified: Azure Administrator Associate**
- **AWS Certified Cloud Practitioner**
- **Microsoft Azure AI Fundamentals**
- Oracle Database 12c
- Scrum Fundamentals
- Agile Security
